

MAJORING IN GEOMATICS

Geomatics is the integrated approach to measurement, analysis, and management of spatial data. Graduates are employed by government and private organizations in surveying and mapping positions, as well as other facets of collecting, analyzing, and using spatial data. The major is accredited by the Accreditation Board for Engineering and Technology.

The following is a suggested course track. While it is preferred that students begin courses in Fall (August), students may be admitted for the Fall, Spring, or Summer terms.
